

PREMIUM PINE PRODUCTS

What Does Pyramid Peak Mean for You?

Kiln Dried ESLP - ESLP is fine grained, has small tight knots, and is extremely stable. With knots that rarely bleed, it provides for a consistent finish.

Premium Grade - Pyramid Peak products are graded after moulding to our specifications. This means the bottom 5-10% is pulled out *after* the products are run to pattern.

Superior Packaging - Pyramid Peak patterns are sub bundled, end capped, and all orders are paper wrapped. Pyramid Peak boards are conveniently available in pulled to length full units, half packs, or custom tally units with corner protectors.

PREFINISHED UV COATING

Pyramid Peak clear finish is the best in the business. This two coat process is sanded between coats and is UV cured. The end result is an exemplary finish that cannot be duplicated in the field.

Prefinishing is a value added process that not only brings a better product to the market, but will also save contractors time.

With several Prefinished products in stock, MIDWEST LUMBER is poised to help you grow your business.
